Haroon Khurram

Lahore, Pakistan | harooneagle.ier@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Science student with hands-on experience in data analytics, SQL, Python, and Power BI, combined with a strong foundation in software development and database design. Skilled at applying artificial intelligence and statistical concepts to solve real-world problems through analytical thinking and structured, detail-oriented execution. Comfortable collaborating within teams to gather requirements, build data-driven solutions, and communicate insights clearly. Committed to continuous learning and staying current with evolving tools and technologies across data, backend, and full-stack development.

TECHNICAL SKILLS

Programming: Python, C#, JavaScript, HTML, CSS, SQL

Database: SQL Server, PostgreSQL, SQLite, Database Design, Data Modeling

Data Analytics: Power BI, Excel, Data Cleaning, Data Validation, Data Visualization, Reporting

Software Development: .NET, Flask, Git, GitHub, REST APIs, Backend Development, Frontend Development

Concepts: Data Structures, Algorithms, Machine Learning Fundamentals, Statistical Analysis, Problem Solving

PROJECTS

Omni-WebScraper | *C#, .NET, SQL Server, HTML Parsing, GitHub*

- Designed and built a multi-site web scraping application in C# and .NET to automate extraction of structured data from multiple websites, reducing manual data collection effort.
- Implemented HTML parsing logic to identify and extract target data fields accurately across varying page layouts and site structures.
- Developed a data cleaning pipeline to validate, standardize, and store extracted data in a SQL Server database, improving downstream data quality.
- Architected the scraper with a modular, multi-site design so new target sites can be added with minimal code changes.

AT-PAS (Attendance Tracking & Performance Analytics System) | *Python, Flask, SQLite, HTML, CSS, JavaScript, Power BI*

- Developed a full-stack application with a JavaScript, HTML, and CSS frontend and a Python (Flask) backend with SQLite storage to automate recurring data and reporting tasks.
- Built interactive Power BI dashboards to visualize key metrics and support faster, data-driven decision-making.
- Automated data processing and reporting workflows, reducing time spent on manual report generation.

Food Delivery Database System | *PostgreSQL, SQL, Database Design*

- Designed a normalized relational database schema for a food delivery platform, including a complete ER diagram covering customers, orders, restaurants, and deliveries.
- Wrote SQL queries, joins, and views to support common business operations such as order tracking and sales reporting.
- Applied normalization principles and primary/foreign key constraints to ensure data integrity and eliminate redundancy.

Human Following Robot (Digital Logic Design, team of 5) | *IR Sensor, Relay Module, DC Motor, Proteus*

- Designed a hardware-only, proximity-triggered robot car in which an IR sensor signal switches a relay to drive the motor, with no microcontroller or programming.
- Simulated the circuit in Proteus before assembling and testing the physical prototype as part of a five-member team.

EDUCATION

Bachelor of Science in Data Science Expected Graduation: September 2029

University of Engineering and Technology (UET), Lahore, Pakistan

CERTIFICATIONS

- AI Fundamentals, DataCamp (August 2026)
- SQL Associate, DataCamp (July 2026)
- Basics of Microsoft Power BI, UniAthena with Cambridge International Qualifications (January 2026)
- Introduction to Data Analytics, IBM through Coursera (October 2025)

ADDITIONAL INFORMATION

Core competencies: Business Intelligence, Data Processing, Requirements Gathering, Stakeholder Collaboration, Automation, Communication, Teamwork.
